ICT administrator course (2nd edition)
START DATE: 15 January 2018

Description

This free course brings **ICT administrators** together to hear about **current practices and new developments**, to **learn from each other** and to **reflect on their work** through a mix of over 20 specially commissioned video case studies produced by practitioners, live webinars with expert input, and stimulating, enjoyable and relevant activities and discussions.

The focus of the course is on practical understanding and day-to-day problem-solving. We will be reflecting, discussing and sharing with each other about these topics. You will find a community of like-minded professionals on the course who can support each other in improving their practices. We will be using a variety of online tools and social media to communicate with each other and engage in peer review activities.

Objectives

The course aims to build your knowledge, skills and confidence in six key topic areas: **Optimising the school network**, **Wireless networking** and **Bring Your Own Device**, **Cloud models and services**, **Securing networks** and **digital safety**, **New tools and services** (including technology for special needs), and **Professional skills and tips**, including **producing a school ICT development plan.** Badges are awarded for module completion; those completing all course requirements are awarded a certificate.

CISCO

The course – based on the successful first edition which 97% of respondents rated 'good' or 'very good' in a follow-up survey – is led by technical and pedagogical experts at European Schoolnet and is supported with funding and expertise from the Cisco Networking Academy. Video contributions were kindly provided by volunteers from schools. More details can be found in the Introduction section of the course which opens a week before the course launch date.
